

These are NOT notes. They are a visual aid(20%) for a verbal explanation(80%).

$$\textcircled{a} \quad t = t_{\text{top}}, y = y_{\text{top}}, x = x_{\text{top}}, V_y|_{t=t_{\text{top}}} = 0$$

$$\textcircled{4} \quad V_y|_{t=t_{\text{top}}} = 0 = 7.5 - 9.8 t_{\text{top}} \quad \star !!$$

∴ ☺

$$\therefore t_{\text{top}} = \frac{7.5}{9.8} = \underline{\underline{0.765 \text{ seconds}}}$$

$$\star \textcircled{2} \Rightarrow y_{\text{top}} = 7.5 t_{\text{top}} - 4.9 t_{\text{top}}^2 = 2.87 \text{ meters}$$

$$\textcircled{1} \Rightarrow x_{\text{top}} = 13 t_{\text{top}} = 9.95 \text{ meters}$$

$$\textcircled{3} \Rightarrow V_x|_{t=t_{\text{top}}} = 13 \text{ m/s}$$

$$\vec{V}|_{t=t_{\text{top}}} = V_y|_{t=t_{\text{top}}} \hat{j} + V_x|_{t=t_{\text{top}}} \hat{i} = \underline{\underline{13 \hat{i}}}$$

\* Rock is 102.87 m above base of cliff.

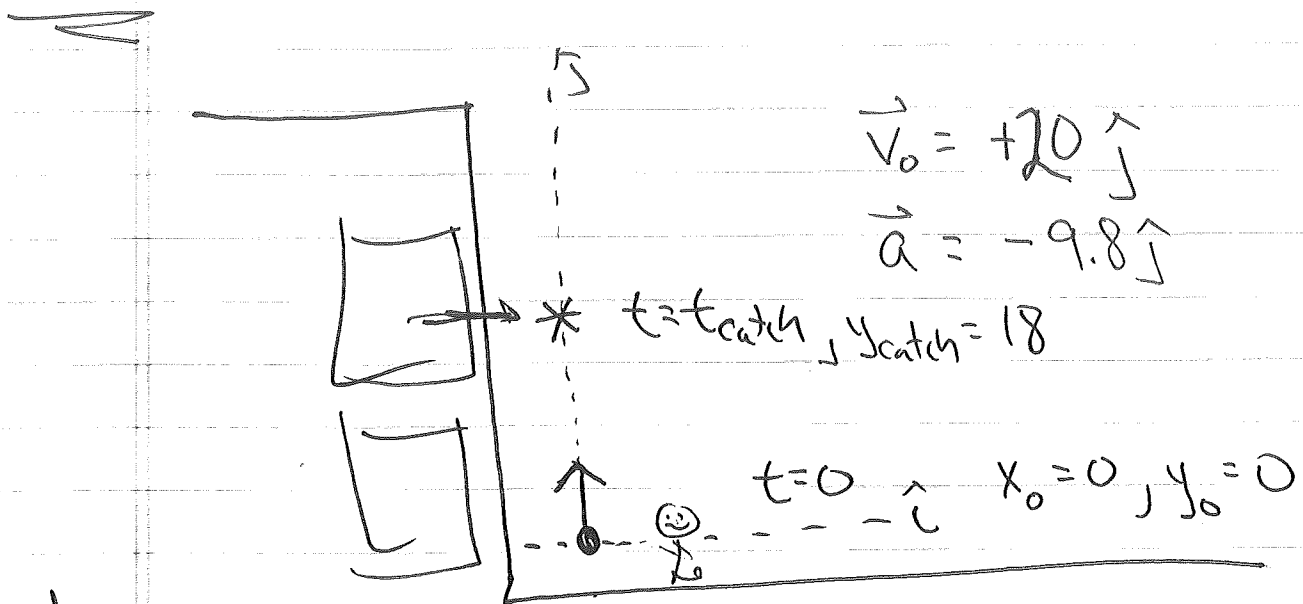

These are NOT notes. They are a visual aid(20%) for a verbal explanation(80%).

①

Ex.) You have left the dorm w/ your roommate's car keys. She shouts @ you from the 2<sup>nd</sup> floor window (you walk over). You throw the keys up to her w/ an initial velocity of  $20 \text{ m/s}$  (😊). The window is 18m above the point where you released the keys.

How long after you throw them does she catch them?

How fast are they moving when she catches them?

1-d  
😊

$$\begin{cases} y(t) = y_0 + v_0 t + \frac{1}{2} a t^2 \\ v(t) = v_0 + a t \end{cases}$$

$$\begin{cases} y(t) = 20t - 4.9t^2 & \text{①} \\ v(t) = 20 - 9.8t & \text{②} \end{cases}$$

Done!!  
=

These are NOT notes. They are a visual aid(20%) for a verbal explanation(80%).

3

$$\text{@ } t = t_{\text{catch}}, y = y_{\text{catch}} = 18, v = v_{\text{catch}}$$

$$\text{①} \Rightarrow 18 = 20t_{\text{catch}} - 4.9t_{\text{catch}}^2$$

$$4.9t_{\text{catch}}^2 - 20t_{\text{catch}} + 18 = 0$$

$$\therefore t_{\text{catch}} = \frac{+20 \pm \sqrt{400 - 4(4.9)(18)}}{9.8}$$

$$1.34 \text{ seconds} \quad \boxed{\text{OR}} \quad 2.74 \text{ seconds}$$

$$\text{②} \quad v_{\text{catch}} = 20 - 9.8t_{\text{catch}}$$

$$+6.87^x \text{ m/s} \quad \boxed{\text{OR}} \quad -6.85^x \text{ m/s}$$

EXPECT SAME from Symmetry of Problem.

If it is not caught on way up, what max. height does it reach?  
What is its speed @ that max. height?

L.T.V.

EX] Reaction time. is typically 0.2 seconds.

How far will an object "free fall" in that time?

Force of gravity is only force

W EARTH N

$$\begin{cases}
 y(t) = y_0 + v_0 t + \frac{1}{2} a t^2 \\
 v(t) = v_0 + a t
 \end{cases}$$

$$\begin{cases}
 y(t) = +4.9 t^2 & (1) \\
 v(t) = +9.8 t & (2)
 \end{cases}$$

①  $t = t_{catch}$ ,  $y = y_{catch}$ ,  $v_{catch} = ?$

①  $\Rightarrow y_{catch} = 4.9(0.2)^2 = \underline{\underline{0.196 \text{ meters}}}$

②  $\Rightarrow v_{catch} = 9.8(0.2) = \underline{\underline{1.96 \text{ m/s}}}$
